EXPERIENCE

Senior Software Engineer - III March 2022 - Present
Indeed.com — Austin, TX

Senior software engineer leading cross-team technical initiatives across verification, screening, and platform systems at scale. Drove feature delivery, architectural simplification, and legacy decommissioning. Known for sound architectural decisions, mentoring engineers, and balancing delivery with long-term investment.

Development

- Developed an employer driven candidate quality screening application to help better match employers to job seekers by allowing tailored filtering and improving candidate quality
- Developed load testing tools and guided scaling efforts
- Designed and built out GraphQL APIs and integrations across numerous applications
- Led end-to-end design and delivery of Job Seeker Identity Verification across 3 cross-functional teams; built modular UI and plugin architecture integrating with a 3rd-party identity provider.
- Prototyped compliance verification module and built 3rd-party Nursing License Verification UI with AI-accelerated test generation, coordinating backend schema changes
- Led technical design for License & Certification File Upload and screening question schema for expanded license type coverage.
- Owned legacy assessment service decommissioning — shutdown plan, data migrations, handoff docs — saving ∼$210K/year.
- Led screener question migration to a centralized platform — designed bulk fetch API, guided a junior engineer through implementation, and eliminated duplicate data storage.
- Executed monolith decomposition with ORM optimizations achieving ∼90% reduction in API overhead; drafted long-term roadmap.
- Shipped recommendation module, live workflow editing MVP, and generic user messaging system — each involving multi-round bug bashes or cross-team coordination.

Collaboration & Mentorship

- Mentored junior and mid-level engineers through structured delegation — cited by peers for well-scoped, estimable breakdowns.
- Formalized operational excellence processes; reviewed cross-org technical designs and provided feedback shaping implementation direction.

Skills: React, TypeScript, Playwright, micro-frontend/plugin architecture · Java/Spring, Python/Django, GraphQL · GitLab CI, Datadog, Terraform, MongoDB Atlas, AWS · Windsurf/Cascade, LLM-assisted code generation & analysis · Technical design, cross-team coordination, mentorship

Staff Software Engineer August 2016 - November 2021
Vrbo, part of Expedia Group — Austin, TX

- Team lead and developer for the Vrbo checkout application (React, Node, GraphQL). Drove technical direction and ensured tasks were properly scoped within the agile process.
- Developed two responsive greenfield calendar-based supplier-focused applications using React/Redux with a Java backend.
- Contributed to monolith decomposition into smaller services targeting continuous deployment using Node and Docker.
- Built Splunk and DataDog monitoring dashboards to track application health and drive incident response.
- Covered interim management duties for ∼3 months across 3 teams. Actively involved in interviewing and hiring.

Senior Full-Stack Software Engineer May 2014 - June 2016
Comprehend Systems — Austin, TX

- Full-stack engineer on a SaaS platform for clinical trials. Built responsive single-page application in React with Sass; back-end in Scala on Spray/Akka/Slick with Storm and Kafka for data pipelines.
- Owned devops including deployments and on-call with Ansible, Docker, Marathon, Mesos, haproxy, nginx, and Elasticsearch.
- First remote engineer at the company; established remote work practices and guidelines for the broader organization.

Technical Leader Jan. 2010 - April 2014
Cisco Systems, Inc. — Advanced Security Initiatives Group
Austin, TX and Knoxville, TN

- Led security and quality evaluations across a wide array of products through code audits, custom tooling, architecture review, and live analysis — improving product resilience company-wide.
- Boot-strapped a new Austin-based product security evaluation engineering site to full production including hiring and training.

Software Engineer April 2006 - January 2010
Cisco Systems, Inc. — Knoxville, TN

- Developed in C for Cisco IOS (real-time embedded OS). Built critical security features including ASLR and Object Size Checking. Engaged in low-level MIPS/PPC feature development for TLB-level memory permissions.

EDUCATION

Master of Science, Computer Science December 2005
University of Tennessee, Knoxville, TN
